1 Introduction Assembling

1.1 General information

This equipment should be installed, inspected, maintained and operated in accordance with EN1176-7 guidelines.

Before installation work commences, please check that you have all of the equipment and fixation components in the parts list provided (see Tables 3-1 and 3-2).

Please consider that the installation has to be carried out only on even terrain (max.slope up to 3%).

Any spare parts that may be required can be obtained directly from your supplier or from Fa. Huck Seiltechnik GmbH

Adress: Huck Seiltechnik GmbH
 Dillerberg 3
 D-35614 Asslar/Berghausen
 Tel. +49 6443 83 11-0
 Fax +49 6443 83 11-79

Please do not hesitate to call your supplier if you have any problems during installation or with any other questions. You can reach us at the following **Tel. +49 6443 83 11-0.**

Following installation, complete assembly instructions, maintenance instructions and a maintenance record must be sent to the operator who must confirm receipt in writing. See the last page of this document.

All nuts and bolts are hot-dip galvanised or stainless steel. One of the characteristics of stainless steel is that uncontrolled cold welding may occur when the nuts are tightened. To prevent this, it is necessary to spray the nuts and bolts with Teflon spray or another similar lubricant.

Drawings / Views

All optical drawings are showing only the measurements/dimensions and are no mandatory technical views of the complete item.

We reserve the right to change technical details of our articles which are serving for the further development of our articles and are reasonable for the customer.

Measurement tolerances

Because of the properties and characteristics of the components, minor measurement tolerances compared to the indication on the sketches are possible.

This concerns all shown measurements except the foundation measurements resp. measurements below upper edge ground level/play area.

2 Datasheet: Slowworm Art.-Nr.4591-81-BM

Space requirement: 4.25 m x 4.12 m
Safety zone: 7.10 x 7.05 m
Height of equipment: 0.60 m
Height of fall: 0.60 m
Fall protection area: 32.2 m²

Surface material	Description / mm	Minimum thickness of layer / mm	Maximum height of fall / mm
Lawn / topsoil	-	-	≤ 1000*
Bark mulch	20 – 80 Particle size	300	≤ 2000
		400	≤ 3000
Wood chips	5 – 30 Particle size	300	≤ 2000
		400	≤ 3000
Sand	0,25 – 2 Grain size	300	≤ 2000
		400	≤ 3000
Gravel	0,25 – 8 Grain size	300	≤ 2000
		400	≤ 3000
Other floor materials	As per HIC audited		Critical drop height as tested
Sand and gravel must be well rounded to remove most of the silty or clayey particles. Washed sand or gravel is considered to be alluvial and free from silty or clayey particles. With gravel this is generally described as "pearl gravel". Degree of non-uniformity D60/D10 < 3.0. The grain size can be determined by using a sieve method.			

1. Required safety surface
Name and size of the largest part of the device:
PP-Rope pos. 01 / 900mm x 11900mm long
2. Name and weight of the heaviest part of the equipment:
PP-Rope pos. 01 / ca. 283 kg
3. Intended age group: from 3 years
Attention! Device for embedding + for setting in concrete:

Excavation size:

Lifting 800 mm deep, size see drawing

4. assembly time approx. 1.5 hours after completion of the excavation of the respective excavation sizes
Needed persons: 3
5. Possibly required spare parts can be obtained directly from your supplier or from the company Huck Seiltechnik GmbH

Address: Huck Seiltechnik GmbH
Dillerberg 3
D-35614 Asslar/Berghausen
Tel. +49(0)6443/8311-0
Fax. +49(0)6443/8311-79

6. **We hereby confirm that this play equipment has been tested and certified in accordance with the play equipment standard EN 1176-1.**

3 Required safety surface: Delivery contents (parts list with part numbers)

3.1. In words

Table 3-1: Delivery contents, in words

Pos.	Quantity	Element / Description	Size	O.K.	Mis- sing
1.0	1x	PP-Rope, square	Ø 160mm ca. L=4,0m		
1.1	11x	Hexagon head screw DIN 933 full thread vz + U-Sch. DIN 9021 Vz.	M16 x 30 + U-Sch.		
1.2	22x	Hexagon head screw galvanized DIN 931 partial thread	M10 x 75 mm		
1.3	22x	Galvanized cap nut DIN 986 with stop function	M10		
2.0	3x	Steelpost galv.	Ø 51 x 2,9mm L=1,05m		
2.1	3x	Steelpost galv	Ø 51 x 2,9mm L=1,18m		
2.2	5x	Steelpost galv	Ø 51 x 2,9mm L=0,89m		
3.0	11x	Anchor flat zinc plated	500 x 500 mm		

3.2. In symbols

Pos.	Quantity	Symbol
1.0	1x	 L= ca.11.90 m
1.1	11x	 M16 x 30mm + M16 / Ø50mm
1.2	22x	 M10 x 75mm
1.3	22x	 M10
2.0	3x	 Ø 51mm x 2,9mm L= 1,05m
2.1	3x	 Ø 51mm x 2,9mm L= 1,18m

Pos.	Quantity	Symbol
2.2	5x	 Ø 51 mm x 2,90 mm L = 0,89 m
3.0	11x	 500 x 500mm

Explanation of abbreviations and signs

	Abbreviations
Ka.O	Edge points upwards
Sp-Gr.	Put the play equipment on the tubes
Aus.v.v.	Thoroughly recompact the excavated material
G	Seepage layer 10 cm
PS	Security area
Wa.A.b	Observe the maintenance instructions!!!

See drawings!

Screw locking device!

**Glue all screws, nuts and sleeves with loctite.
(Not less than 5 drops!)
(except for lock nut)**

4 Assembly instructions

Mounting

5 Post installation checks

Notice

If the equipment has not been installed safely, you must ensure that the public is prevented from using it.

5.1 Marking filler depth

Labelling the posts to show the depth of material provided as fall protection (i.e. loose filler).

5.2 The equipment has not been installed safely in the following cases:

- Safe equipment installation is not complete.
- The protective surface has not been installed yet.
- Appropriate maintenance work cannot guarantee operational safety.

5.3 Removal of all assembly aids

Please make sure that all assembly aids have been removed from the playing area. The equipment must not be approved for use until this check has been made.

5.4 Information about inspection of the equipment before it is used for the first time

There are no special inspection requirements to be met before the equipment is used for the first time.

5.5 Retighten bolts

After one week of play, please retighten all bolts again. Later upon respective maintenance.

6 Introduction Maintenance

6.1 General informations

This equipment should be installed, inspected, maintained and operated in accordance with EN 1176-7 guidelines.

Notice

Please note: Providing any necessary repairs are carried out, a piece of play equipment that is inspected regularly cannot become so damaged that it is dangerous.

Any spare parts which may be required can be obtained directly from your supplier or from Fa. Huck Seiltechnik GmbH

Adress: Huck Seiltechnik GmbH
 Dillerberg 3
 D-35614 Asslar/Berghausen
 Tel. +49 6443 83 11-99
 Fax +49 6443 83 11-79

This equipment should only be assembled, maintained and repaired by **persons with the necessary expertise.**

A copy of the inspection record should be given to the operator, who must confirm receipt.

**This maintenance instruction is based on the standard
“EN 1176-1:2017”.**

7 General maintenance information

7.1 Maintenance intervals

Maintenance intervals are based on average use. Please note that more frequent inspections and/or maintenance are required if the play equipment is subject to intensive use.

7.2 Inspection frequency

The frequency of inspections must be based on actual use. Factors that affect frequency include vandalism, location (e.g. coastal proximity), air pollution and the age of the equipment.

7.3 Maintenance products and procedures

All nuts and bolts are hot-dip galvanised or stainless steel. One of the characteristics of stainless steel is that uncontrolled cold welding may occur when the nuts are tightened. To prevent this, it is necessary to spray the nuts and bolts with Teflon spray or another similar lubricant.

7.4 Spare parts

All spare parts must conform to the manufacturer's specifications.

7.5 Identifying spare parts

All spare parts are listed in the parts list. The parts list follows the installation requirements.

7.6 Special instructions for the disposal of individual equipment components

No special instructions are necessary for the disposal of individual equipment components.

7.7 Special measures during the break-in period

No later than 2 weeks after assembly, all screwed connections should be checked and tightened if necessary.

7.8 Maintenance of protective surfaces

Surfaces providing fall protection must also be maintained regularly. It is particularly important to maintain the correct level of loose surface material and add more if necessary.

7.9 Faults

Faults must be repaired as soon as they are detected. If serious defects that compromise safety cannot be repaired straight away, the public must be prevented from using the equipment with immediate effect.

7.10 Loose screws

Loose screws always cause quality problems and put safety at risk. Therefore, loose screws should always be tightened and checks carried out to ensure that there are no missing screws (e.g. look out for holes you can see through).

7.11 Preventing equipment use

Use of the equipment should be prevented in the event of incomplete installation, disassembly, maintenance, repairs and faults.

7.12 Claims/liability for faults

Steel posts and footings are guaranteed if regular maintenance is carried out and recorded in writing. Our general terms and conditions apply. Maintenance first takes place after 3 years. The steel posts must be excavated as far as the concrete foundations and checked for corrosion.

Zinc paint should be applied to any corroded areas and scratches. Check ropes for abrasion. Retreat any that are very worn.

8 Maintenance timetable

8.1 Special advices

8.1.1 Maintenance interval

We strongly advise you to carry out inspections and maintenance work within the specified periods as use of the equipment, the weather and malicious vandalism cause wear and tear that compromises the safety and function of the equipment.

8.1.2 Maintenance intervals in the event of intensive use

Please note that more frequent inspections and/or maintenance are required if the equipment is subject to intensive use.

8.1.3 Faults that compromise safety

Notice

In the event of a fault that compromises safety, quick action must be taken. This may involve repairing it immediately or shutting down and dismantling the equipment.

8.1.4 Faults that compromise function

Notice

Faults that compromise function should also be repaired immediately. Such faults lower the value of the equipment to the user and encourage malicious vandalism, which may render the equipment less safe. Any damage should also be repaired immediately.

9 Regular maintenance

Regular maintenance

10 Monthly maintenance

- 10.1 Check the spaces between the equipment and the ground (clearance and height of fall).**
- 10.2 Check the ground surface in the area with fall protection for hard objects and loose foundations.**
- 10.3 Check all connecting elements and fittings for wear and tear and tighten if necessary. Replace damaged or missing parts.**
- 10.4 Check that moving metal parts (joints, springs, etc.) move smoothly and are not worn. Replace if necessary. It is not necessary to lubricate joints as we only use maintenance-free metal roller bearings.**
- 10.5 Check all attachments such as chains, ropes, nets, etc. for damage and replace if necessary.**
- 10.6 Check rubber parts, sleeves, etc. for wear and tear or damage and replace if necessary.**
- 10.7 If necessary, remove excess padding material from the post footings due to danger of rotting.**
- 10.8 Check the surface of wooden parts for damage caused by the weather or external influences and mould. Repair or replace if necessary.**
- 10.9 Check the surface of plastic and metal parts, e.g. slides, for damage and replace if necessary.**

11 Quarterly maintenance

- 11.1 Detailed inspection of the operation and stability of the equipment paying particular attention to any wear and tear.**
- 11.2 Tighten all forms of attachment.**
- 11.3 Repaint and retreat surfaces.**
- 11.4 Maintenance of fall protection surfaces.**
- 11.5 Lubrication of joints.**
- 11.6 Check the height of the fall and top up with loose filler if necessary. If the posts are labelled, top up as far as the mark.**
- 11.7 Retighten all bolts**

12 Half yearly maintenance

- 12.1 Stability (check posts, bracing, foundations, etc.). Ascertaining whether there are any changes in equipment safety as a result of repairs that have been carried out or components that have been added or replaced.

	Annual Maintenance
---	-----------------------------

13 Annual maintenance

- 13.1 Ascertaining that the equipment, foundations and surfaces are safe for operation.
- 13.2 In particular, the equipment should be checked for decay and corrosion. It may be necessary to dig out or excavate certain components in order to do so. Zinc paint should be applied to corroded areas and scratches.

	The equipment must be inspected by someone with the necessary expertise in strict compliance with the instructions issued by Huck Seiltechnik GmbH. A copy of the inspection record should be given to the operator, who must confirm receipt.
